**Review Data Access Hierarchy Discussed During 4-29-04 Teleconference:**

- No sharing at all
- Sharing restricted to active collaborators
- Limited sharing within a broader research community (e.g., the NCI's Early Detection Research Network (EDRN))
- Open data sharing without any restrictions (e.g., data are accessible through a website)

Should this hierarchy be refined? If not, should the DSIC Working Group recommend this approach to the Architecture Workspace?
